AlcoCONNECT
data management

LIVE DRUG & ALCOHOL DATA MANAGEMENT

- ✔ **Drug and Alcohol test data at your fingertips**
- ✔ **Dashboards with real-time data analysis**
- ✔ **Monitor compliance in daily testing programs**
- ✔ **Identify risk areas with drill-down capability**
- ✔ **Export data for reporting**
- ✔ **Multi-factor security for maximum data integrity**

AlcoCONNECT™ Live Data Management is an essential tool for Safety and Business managers seeking real-time, analysed Alcohol and Drug test results from across their business.

The AlcoCONNECT™ Live Data Management system combines Alcolizer's innovative testing technology with state-of-the-art business solutions.

ACHIEVE YOUR DRUG & ALCOHOL PROGRAM OBJECTIVES

We understand that every work place strives to be drug and alcohol free.

Alcolizer's AlcoCONNECT™ Live Data Management system provides you with real-time analysis on the effectiveness of your drug and alcohol program.

Understanding where and how exception tests occur enables you to target where additional training and support is required. By doing so you can ensure all employees are best able to comply with your site's safety requirements.

You will identify hot spots in your business and target resources so you can maximise the effectiveness of your testing spend.

RELIABLE, FAST, CONFIDENTIAL ACCESS

Drug and alcohol tests undertaken by connected Alcolizer Technology devices are available confidentially on our AlcoCONNECT™ Data Management portal.

Management can view the data for their site, while national managers can view tests from every site.
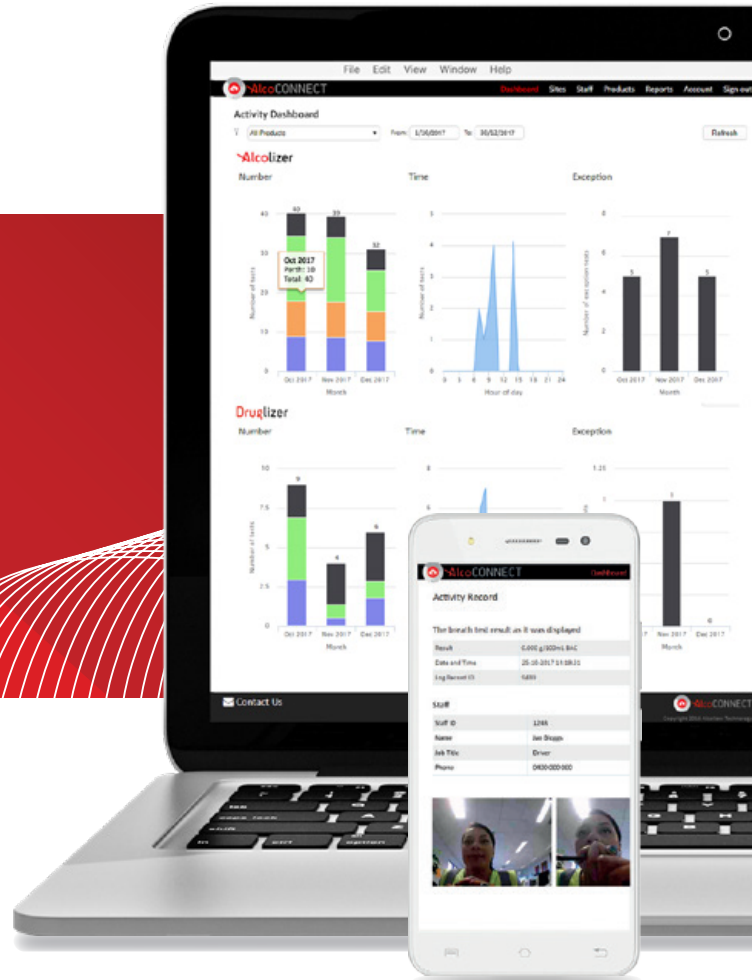

EASY COMPLIANCE WITH ELECTRONIC DATA – NO MORE PAPERWORK!

AlcoCONNECT™ Data Management records all drug and alcohol test data onto a secure electronic database.

Compliance reports are generated from this information and email alerts are sent to management when an exception test is recorded.

DATA SECURITY IS ASSURED

Alcolizer Technology ensures that your confidential data is available 24/7 and is fully-secure. The system utilises a Secure Sockets Layer, link encryption and Multi-factor authentication via a data centre in Sydney.

FEATURES

- Remote results monitoring
- Real-time alerts
- Instant access from anywhere in the world
- Dashboard user interface for at-a-glance results accessibility
- Automatic service and technical issue alerts delivered directly to Alcolizer Technology factory trained engineers
- Multiple-location synchronisation
- Secure cloud-based test results storage

SECURE DATA PROTECTION · SSL + MFA

AT-A-GLANCE DASHBOARDS

AlcoCONNECT™ Live dashboards provide an easy at-a-glance view of your test data by number of tests, site location, time of day and result.

Alcolizer and Druglizer test data

Drug and Alcohol test data – logged by various Alcolizer Technology alcohol and drug testing equipment – is displayed separately in three graph data sections, *Alcolizer*, *Druglizer* and *OnSite Testing*. These graphs provide the following data summaries:

- **Number** – the number of readings by month, grouped by Site.
- **Time** – the number of readings by time taken.
- **Exception** – the number of exception readings by month, grouped by Site.

ACTIVITIES LISTS AND RECORDS

Drill down into this data for access to original alcohol, drug screen and lab confirmation results – do so by clicking (or tapping) the *Number* and *Exception* coloured segments to open an *Activities* List.

Click/tap an entry in the list to open an *Activity Record* screen – this is where you can view all details of the test record.

Only users that have been set up with appropriate access will be able to view the data within these records.
Note: camera photo capture is an optional feature only available on an Alcolizer Wall Mount 4 or Centurion.
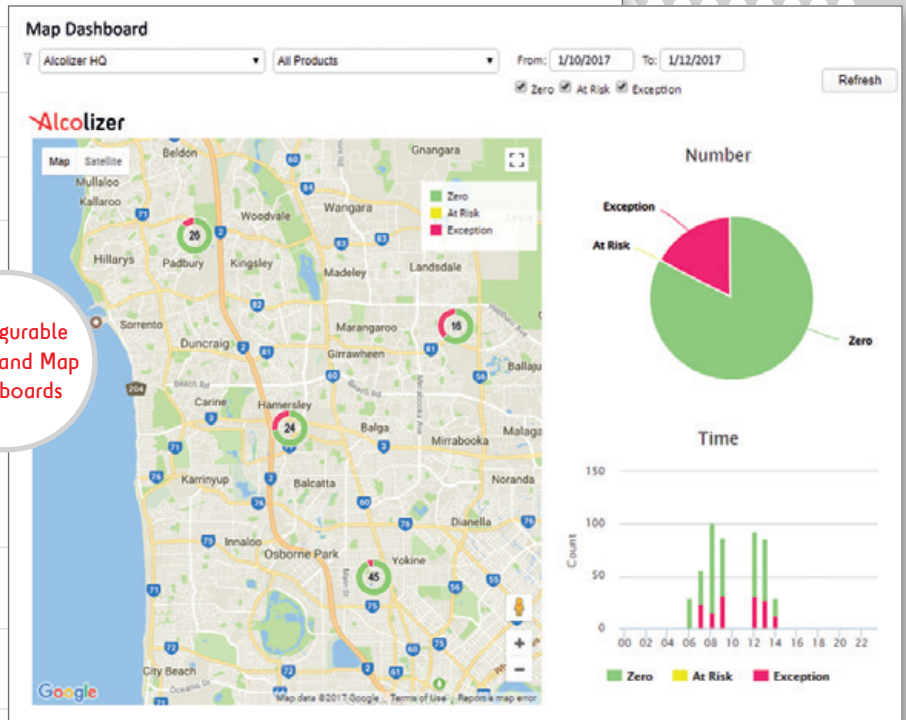

REPORTS, AUTOMATION AND MANAGEMENT

Managers with appropriate permissions can access and download various reports such as Breathalyser Activity, Staff Activity and OnSite Testing Activity. Emailing of reports can be also automated and, when coupled with an internet connected Alcolizer wall mount device, users can receive an email when an exception is recorded.
Managers can upload and maintain staff lists containing information such as staff positions and identification data.
