

FEATURE FOCUS

Drug and Alcohol Testing Integration with AccessFlow Workforce Management

AccessFlow Workforce Management offers a comprehensive and automated solution for drug and alcohol testing, ensuring safety and compliance across your facilities. This integration is seamlessly connected with the Access Control System and Video Management System (e.g., Genetec Security Center), providing an efficient and secure process for managing compliant access to site.

Test and Monitor Worker Fitness

AccessFlow Workforce Management integrates with drug and alcohol testing technology to ensure that employees are fit for duty, reducing production risks and enhancing workplace safety. This proactive solution identifies potential alcohol and drug impairments through

rigorous testing, automatically managing access control permissions based on the results to prevent safety incidents and maintain operational continuity.

AccessFlow's inbuilt randomisation engine with customisable variables, prompts cardholders for screenings, with access control restrictions enforced until all clearances are obtained, ensuring organisational compliance can be met with efficiency and without discrimination.

Failed tests trigger real-time alerts, automatically denying site access to affected individuals and notifying supervisors immediately via email or SMS to take appropriate action.

Key Features

AUTOMATED TESTING PROCESS WITH ACCESS CONTROL SYSTEM INTEGRATION

- Employees, contractors, visitors, and workers are randomly selected for testing before facility access.
- Integration with the Access Control System detects access requests, initiating the testing process.
- Access privileges are granted automatically upon passing the test within a reasonable timeframe.

REAL-TIME NOTIFICATIONS AND ACTIVITY MONITORING

- Facility managers, supervisors, and security personnel are notified at each stage of the testing process.
- Notifications cover all critical points: selection for testing, testing initiation, test results (pass/fail), and test time-outs.

PROPRIETARY RANDOM SELECTION ALGORITHM

- Flexible algorithm ensures testing can be streamlined even during busy hours, such as shift change times.
- Ensure organisational compliance can be met without discrimination.

VIDEO MANAGEMENT SYSTEM INTEGRATION

- Alarms triggered for each state of the drug and alcohol testing workflow:

Selected for testing

Testing started

Test failed

Test passed

Test timed-out

Alarms can be used to bookmark cameras in the testing area, enhancing surveillance and incident tracking.

Incident creation is streamlined, allowing for efficient response and documentation.

Key Benefits

Enhanced Security Measures

- Ensures only individuals who pass the drug and alcohol tests are granted access.
- Increases overall safety and compliance within the facility.

Significantly reduces the risk of incidents related to substance use.

Streamlined Operations

- Automates the entire testing and access control process, reducing administrative burden.
- Facilitates quick decision-making and action by relevant stakeholders through timely notifications.
- Integrates seamlessly with existing security infrastructure, maximising the utility of your security investments.

Detailed Reporting and Insights

- Our intuitive web-based platform offers comprehensive historical testing records for all personnel.
- Detailed reports offer deep insights into trends and issues, enabling facility managers to identify patterns and address potential problems proactively.
- The ability to analyse this data helps in making informed decisions, improving safety protocols, and ensuring compliance with regulatory standards.
